

Amendments to the Abstract:

Replace the Abstract with the following:

An attachment device for a slide channel for a door closer, including a clamping piece insertable into an end of the slide channel, the clamping piece having a first outside surface and a first toothing on the first outside surface; and a connecting plate integrally formed with the clamping piece and having a bore by which the connecting plate can be connected to a sub-construction. When the clamping piece is inserted into the end of the slide channel, the connecting plate is disposed outside of the slide channel, and the first toothing abuts against a first inside surface of the end of the slide channel by press fit so that the clamping piece is detachably interlocked with the slide channel.
